Environmental Scientist
Ohio Environmental Protection Agency
Northeast District Office
2110 Aurora Road
Twinsburg, Ohio 44087

Dear Ms. Berg:

As per your letter dated March 12, I am supplying information concerning the waste disposal practices of the BFGoodrich Company, Avon Lake General Chemical Plant. Table 1 lists all process waste generated by this facility, the hauler and the ultimate disposal site. There is also a reference guide to pertinent sections of the Eckhardt Survey with those pages included as an attachment.

Our on-site practices consist of a lagooning and landfilling operation and an incineration process. PVC resins and latices are stored in two ponds on-site and, after a period of time, the remaining solids are retained on site. This site is listed in the Eckhardt report as being at 33571 Walker Road. Also, we operate an incinerator for burning plasticizer wastes. This process is registered under application number 1947030004 N001.

If you have any questions, please feel free to call.

Very truly yours,

BFGoodrich Company, Chemical Group
